OKO[®]
Power sockets

invented and made by
Mass Tech Innovations GmbH, Austria

MASS TECH

OKO[®] Flush design

Our sockets are not only the smartest furniture sockets manufactured with the highest precision, but also convince with a brilliant and new design.

The covers of our power sockets are available in different colours and can thus be adapted to individual ideas.

OKO[®] Extendable collar

In addition to our current rotary variant, we have also provided other types of actuation for use with the various sockets.

The collar mechanism can also be triggered automatically when plugging in the plug or by simply pressing and can thus be expanded for final use.

The image shows three OKO charging sockets mounted on a dark wood-grain surface. The sockets are thin and circular. The middle one is illuminated with a blue light. The background is a blurred modern interior with a dark wall and a light fixture.

OKO[®]

19mm installation depth

With a mounting depth of only 19mm, our sockets are ideal for flat furniture and offer more flexibility in positioning as well as installation.

The patented, new technology offers an innovative solution for modern home and office environments.

OKO[®] Increased protection

The OKO sockets offer double safety compared to conventional sockets.

Our system prevents unauthorized use of the power socket with a standard shutter and offers even more security with an additional lock for the contact openings.

OKO[®] Smart

The OKO sockets can optionally be controlled via our Smart Basis. Connected devices can be switched on and off manually or automatically via an app.

At the same time, the monitoring of power consumption is enabled, and the own power consumption can be better controlled and monitored.

OKO[®] Mobility

Thanks to their high precision and the use of high-quality materials, our OKO sockets are particularly resistant to vibrations, and other stresses that can occur when used in mobility solutions such as trains.

The sockets are easy to install and provide a convenient and reliable power supply for passengers during the journey.

OKO[®] Installation

The installation of our OKO sockets is simple and quick.

The sockets are installed in a corresponding recess in the furniture and can then be easily connected to the mains.

OKO[®] Summary

The new OKO sockets are an innovative solution for furniture installation.

With their low installation depth and completely flush design, they can be seamlessly integrated into furniture while offering many and new functions.

Our OKO sockets are characterized by high safety standards and are easy to install.
